

CLASS # 30

TAPE MEASURES

These contractor grade tape measures are available in 33', 25', 16' and 12'. They feature the pause button that allows you to extend the blade to the desired length and hold it there by pushing the button down. When you want the blade returned, simply push the lock up and the blade will automatically retract into the housing.

The blades are standard bright yellow with easy to read measurements in feet and inches and the upper scale is readable by 1/16th increments. They also feature the black diamond marking every 19.2".

The black diamond on the top scale starting at 19.2 inches is for truss layouts for 8-foot sheet goods, also referred to as the "black truss" markings. Originally the 19.2 was used in metric layouts so if you divide five into 96 inches (8 feet), it will give 19.2 inches, in other words, 5 trusses per sheet.

The riveted metal tips of these tape measures are made to slide slightly the distance of its' thickness which allows for an accurate measurement from its starting point.

ITEM#:	SIZE:	DESCRIPTION:
499	33' x 1"	STANDARD TAPE MEASURE
500	25' x 1"	STANDARD TAPE MEASURE
504	16' x 3/4"	STANDARD TAPE MEASURE
505	12' x 3/4"	STANDARD TAPE MEASURE

CLASS # 30

100' & 300' TAPE MEASURES

These contractor surveyor tapes are available in three styles and sizes. The 100' fiberglass tape is enclosed in a heavy duty ABS plastic housing that will not crack or rust. It is a hand wind reel with a rewind ratio of 3 to 1. The tape reads both standard and metric.

The 100' Engineers' fiberglass tape is an open reel type. It is 5/8" wide and has 1/10 foot readings on one side for Engineers and feet and inches on the other side for surveyors. It has the open frame with a spike on the bottom for easy staking, and a 'D' handle for carrying or hanging.

The 300' open reel fiberglass tape has the same specs as the engineers tape but is three times the length, and the spike makes 'one man' handling a snap. They are both 'hand rewind' in a heavy duty housing.

ITEM#:	DESCRIPTION:
501	100' FIBERGLASS TAPE MEASURE - CLOSED
502	100' ENGINEER'S TAPE MEASURE - OPEN
507	300' FIBERGLASS TAPE MEASURE - OPEN

CLASS # 30

HIGH SPEED CHALK LINE

This Keson® tear drop chalk line reel holds 100 ft. of line and 4 oz. of chalk. The line terminates with a hook to allow one person operation and the ribbed sides provide sure gripping.

It features a rubber fill grommet for a positive chalk seal and the steel crank handle closes flush and locks to case.

Used for carpentry, bricklaying, wall-papering, flooring, painting, fencing, and building decks. The line can be used in position for plumb line use and the line releases freely when the handle is in the lock position.

CHB8	8 OZ. BLUE MARKING CHALK
CHR8	8 OZ. RED MARKING CHALK

CLASS # 30

COMPACT MEASURING WHEEL

These compact measuring wheels by Keson® are perfect for estimating a job site. They accurately measure all vertical, horizontal and curved surfaces up to 1,000' with a digital readout and have a reset button that will instantly return the reading to zero.

The 3 piece telescoping handle adjusts up to 35" for easy upright, long distance measuring and are only 16" when compacted, so they can be easily carried in an attache case or tool box.

The body is a high visibility yellow, and made to keep out moisture and condensation and they weigh just 1.2 lbs! They are U.S. made by Keson, one of the leading manufactures of precision measuring tools.

CLASS # 30

3 PC. LASER LEVEL & TRIPOD

This is a 3 piece laser level unit in a handy carrying case that'll go with you securely on any job and can be used indoors or outdoors. This includes a 16" laser, a sturdy, completely adjustable tripod with quick clamps, powder coated aluminum sleeve and measured, rotational head.

The two liquid vials are large and easily readable, both horizontal and vertical and the laser beam will project up to 45 meters, approximately 150'.

Uses include hanging cabinets, paintings, wiring, paneling, windows or any type of enclosure. Use for plotting tiles, and a multitude of carpentry and construction work. This is a class 2 laser, CE certified and Kema approved. IMPORTED

CLASS # 30

ROADRUNNER MEASURING WHEEL

These Keson[®] long distance measuring wheels are ideal for estimating large construction sites, parking lots, and other commercial applications. The 2 piece, curved, telescoping handle extends to 42" off the ground for upright, long distance measuring of up to 2 miles.

They have a rugged, wear free wheel available in 4' circumference or 3' circumference and can also accurately measure curvilinear surfaces. They have a digital 5 figure readout and a reset button to instantly return to zero.

The body is a high density ABS housing that is bright yellow in color and completely enclosed to resist moisture and condensation and they have a convenient kickstand to hold them upright. USA made by Keson one of the world's leading manufactures of measuring tools.

MW38	KESON ROADRUNNER 4' MEASURE WHEEL

CLASS # 30

25' TAPE MEASURE W/ LASER

These 1" wide tapes are truly one hand operable. You can extend the tape over 7 feet without it buckling under its own weight. They are triple pinned on the end so they last for years and they're bright yellow and black, so they won't be easily lost.

They have dual bubble levelers on the top, so you can measure out a line with accuracy then simply push the button and the tape measure shoots out a bright red laser line up to 100'. Now, instead of measuring just one line, you can shoot that line across the surface and onto an upright, maintaining a 90° angle. Just level, shoot, and mark it anywhere on the line.

This handy measure has an attached belt clip, and the tape markings are in inches and millimeters. Powered by two 'AAA' batteries. IMPORTED

CLASS # 30

CONTRACTOR GRADE

BALL BEARING TAPE MEASURES

Every contractor uses a tape measure. It's almost always the first thing you notice in their hand or clipped to their tool belt. Good tape measures are as important to contractors as good brakes on your car.. you gotta have 'em!

These are Contractor Grade, ball bearing tape measures that will take the abuse and will surely end up as your contractor's best friend. They have a 3 rivet blade tip, a heavy duty, ABS housing as well as a black rubberized coating for better grip, better feel, and protection if dropped.

The 35' reads Metric and SAE (Standard American Equivalent) and it is 1.08" wide. The 25' reads SAE only and it is 1-5/8" wide. They feature a double ball bearing mechanism, spring steel belt hook, and a blade lock to hold in place. IMPORTED

N152	1.08" x 35' BALL BEARING TAPE MEASURE
N153	1 5/8" x 25' BALL BEARING TAPE MEASURE

CLASS # 30

NON-CONTACT INFRARED THERMOMETER

This hand-held, non contact thermometer safely and instantly measures temperatures to 1,022 degrees without touching the target. The military has developed this technology to give highly accurate results of +/- 4 degrees.

It is used in auto or truck repair shops to scan the manifold temperature and determine low compression or misfire condition. It is also used to check exhaust system components for correct fuel/air mixture, scanning both sides of catalytic converters to check temperature differences, etc.

This is also used by HVAC repair shops to check heating and cooling systems, radiators, air conditioners, thermostats, or by anyone who needs to have an accurate temperature reading on equipment or machinery.

It has a trigger activated laser to aim and identify the reading target and a blue backlit, easy read LCD screen to view temperature in either Celsius or Fahrenheit and holds data on screen for approximately 10 seconds. This is *not* a medical thermometer, and is not to be aimed at eyes.

Specifications:

- **Temperature Range: -4° to 1,022°**
- **Accuracy: +/- 4° (2% reading)**
- **Emissivity: .95**
- **Response Time: 500 mSec, 95 %**
- **9-Volt Battery Included**
- **Ambient Operation Range: 32° to 105°**
- **Distance To Spot: 8:1**
- **Carrying Case Included**
- **IMPORTED**

NON-CONTACT INFRARED THERMOMETER

CLASS # 30

DIGITAL LASER PHOTO TACHOMETER

This is a high quality, digital laser photo tachometer that will accurately measure RPM by laser. For use in all auto repair shops to test the RPM of a driveshaft, or rotor. Can be used in any shop where knowing the revolutions per minute is essential.

It's simple to use because there is no contact necessary with the object to be measured. Comes with a few reflective strips that you simply stick onto a clean, dry, small section of the area being read and at each revolution, as the strip returns, the photo laser captures the reflection and gives an accurate and quick reading on the LCD screen.

Comes with a rugged storage case, 3 reflective strips that can be cut into small, usable sections, and 3 AA Batteries.

Specifications :

- RPM Range: 0 – 99,999 RPM
- 5 Digit LCD Display
- Auto Zero adjustment
- Non-Contact Technology
- Accuracy: 0.05%
- Storage Case Included
- 3 AA Batteries Included
- IMPORTED

DIGITAL LASER PHOTO TACHOMETER

CLASS # 30

DIGITAL TAPE MEASURE

These are the ultimate tape measures for the high tech user. This 25' x 1" tape measure can be used just like any manual tape, but you can also take it to the next level with a digital display on top, with or without the tape case length (for inside measurements).

A great feature of these digital tapes is the built in voice recorder that will record up to two measurements on a 6 second recording and then play back as you need them.

They measure in SAE or METRIC and have the same lock down feature as regular tape measures and have an easy to read LCD display. They come loaded with two NiCad batteries, and there are two extra in the package. The recorder has an ON/OFF button, but will automatically turn off if there is no activity for 5 minutes. IMPORTED
